

# Wambo Coal Real-time Noise Monitoring (24hour)

Wambo Coal's real-time noise monitoring system is utilised for operational response purposes only; not for the purpose of demonstrating compliance with noise limits imposed on the mine. Noise levels displayed in these graphs represent the average low frequency (LF-dBA) noise levels received at the noise recording locations. The noises recorded at these locations include both industrial noise and environmental noise sources (e.g. wind, road traffic, farming) and do not represent noise solely attributable to Wambo Coal's mining activities. If you have any questions regarding the data, please email [wambocommunity@peabodyenergy.com](mailto:wambocommunity@peabodyenergy.com) or contact (02) 6570 2245.
