

**North Goonyella Mine – Bulletin  
May 15, 2019**

- All physical activities in advance of re-ventilating Zone 1 of the mine are complete, including the installation of ventilation fans, emergency-sealing doors and real-time gas monitoring equipment.
- Peabody is continuing to comply with a directive from the Queensland Mines Inspectorate to provide further documentation to support the company's plan to re-ventilate the mine.
- Queensland Mines Rescue Personnel continue preparations while on standby to re-enter the mine.
- The trial processing of co-disposal material from previously discarded waste coal has been successful and has now been extended.
- The company will provide further updates when information is available on [PeabodyEnergy.com](http://PeabodyEnergy.com).
